

PYTHON ASSIGNMENT

Question 1: Calculator

Write a Python program to take two numbers from the user and perform addition, subtraction, multiplication and division.

Answer

```
a = float(input("Enter first number: "))
b = float(input("Enter second number: "))

print("Addition:", a + b)
print("Subtraction:", a - b)
print("Multiplication:", a * b)
print("Division:", a / b)
```

Example Output

```
Enter first number: 10
Enter second number: 5
Addition: 15.0
Subtraction: 5.0
Multiplication: 50.0
Division: 2.0
```

Keywords used: input() takes input, float() converts it to a number, and print() displays the result.
